### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Claims 1-51 are distinguishable over the prior art. As per claim 1, the prior art of record does not show or reasonably suggest, in combination with the other claimed subject matter, a control system for operating a transmission in either one of a normal mode or a hot mode based on a predicted temperature of a torque converter whereby the predicted temperature is compared with a threshold and the operating mode is generated by a timer based thereon. As per claims 14, 27 and 40, the prior art of record does not show or reasonably suggest, in combination with the other claimed subject matter, a control system/method for operating a transmission in either one of a first (normal) mode or a second (hot) mode in which a predicted temperature of a torque converter is calculated based on a thermal model thereof and compared with a threshold whereby the operating mode is chosen based on the comparison. Dependent claims 2-13, 15-26, 28-39 and 41-51 are distinguishable for at least the same reasons.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited documents include various transmission control systems with normal/hot operating modes and use hydraulic temperature sensors, coolant temperature sensors, engine sensors, etc., but fail to disclose or reasonably suggest the distinguishing features noted above.

Art Unit: 3661

The patent to Benford (5,319,963) discloses predicting the temperature of automatic transmission fluid based on torque converter heat flow, but does not disclose predicting the temperature of the torque converter itself and select control modes in conjunction with a timer or using a thermal model of the torque converter.
